

Products: Mobile Evacuation System

Serial Range: N/A

Release Date: February 25, 2020

Mobile Evacuation System

The one-speed exhaust fan used on the mobile evacuation system has changed from a belt-driven fan to a direct drive fan. The direct drive fan has all of the same specifications of the previous fan, mounts to the same smoke extractor curb, and has the same list price. The direct drive fan eliminates the belts and pulleys that require periodic adjustment and replacement. The direct drive fan also includes a variable speed control under the fan cover (as an alternative to the various pulleys on the belt-driven fan that could be used to change the fan speed).

Specifications:

- ETL Listed, conforms to UL Std 705 and UL Subject 762, certified to ULC Std S645 and CSA Std C22.2, No. 113
- Exhaust Motor - 0.25 HP, 115 VAC, 60 Hz, 1 phase, 3.8 Full Load Amps
- External Static Pressure - 0.33 in. wc
- SCFM - 1,000

Additional Comments:

Refer to the exhaust's fans Installation, Operation, and Maintenance Manual for complete instructions.

Secondary Distribution:

Service technicians within the Distributor's organization.

Service companies.
